

HOW TO LOAD YOUR WASTE

Put re-usable household items and separated bottles and cans at the top of your load

- Securely tie down household items that can be dropped off prior to unloading other material
- Place bottles and cans in separate bags that can be emptied and re-used
- Flatten and secure cardboard and paper, keeping them separate from other waste

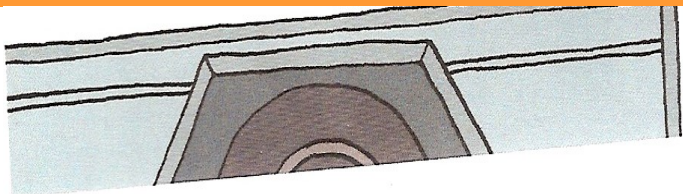

Stack metals so they can be easily unloaded, and bag green waste when part of a mixed load.

- Carefully load metals so they balance your trailer and can be easily dropped off in the metal recycling area
- Keep green waste separate by putting it into bags that can be emptied and re-used or by tying it in bundles.

Begin by filling your ute or trailer with heavy reusable materials

- Evenly distribute soil, concrete, bricks, roof tiles, rocks and rubbles at the base of your load.
- Separate rubbish carefully so that it doesn't contaminate other items.
